

GARDEN 24 PIR-SENSOR

106940

Technical Data

Voltage	24V
IP Class	IP 44

PIR-Sensor instruction:

The PIR-sensor senses movement of people, animals or other objects at or within the effective range of 7 meters and at or within field of view 120°, the light system will be on. After 2 mins, the light system will be off.

Remark:

1. If the movement of people, animals or other objects keeps in the effective range of 7 meters and within the field view of 120°, the light will be steady on. Only when there is no movement within the effective range and field of view, then after 2 mins, the light will be off.
2. The PIR-sensor controls the light to be off when the environment is bright. Even if there is movement in the effective range.
